

POORNA PRASAD D R

Bengaluru, India | 7676457722 | ppoorna166@gmail.com | [LinkedIn](#)

SUMMARY

MCA student (PES University) with a BCA foundation and hands-on project experience across Machine Learning, full-stack web development, and cybersecurity. Built and shipped projects including a stock market prediction model, a CPU scheduling simulator, and an SSH brute-force detection tool. Comfortable across Java, Python, JavaScript, and PHP, with working knowledge of SQL and NoSQL databases. Seeking Software Engineer, Web Developer, or AI/ML Engineer roles.

TECHNICAL SKILLS

- Programming Languages: Java, Python, C, C++, JavaScript, HTML, CSS
- Databases: MySQL, MSSQL, MongoDB
- Web/Frameworks: MERN Stack (MongoDB, Express, React, Node.js), PHP, XAMPP
- Tools & Platforms: Git, GitHub, Windows, Linux
- Core Competencies: Problem Solving, Data Preprocessing & Feature Engineering, Effective Communication, Research

EDUCATION

Master of Computer Applications (MCA) *PES University, Bengaluru | Currently Pursuing*

Bachelor of Computer Applications (BCA) *BGS Business School, Bengaluru | 2025*

- CGPA: 8.04

Pre-University College (PCMB/PCMC) *Aachary Pre-University College, Hassan | 2022*

- Percentage: 83%

INTERNSHIP EXPERIENCE

AI & ML Intern — Inspire Global Technology *Project: Stock Market Predictor*

- Built a stock price prediction pipeline in Python using yfinance to pull multi-year historical OHLC data and pandas for cleaning and preprocessing.
- Trained a scikit-learn Linear Regression model on historical closing prices, using an 80/20 train-test split to evaluate performance.
- Evaluated model accuracy using Mean Squared Error (MSE) and R^2 score, and visualized historical vs. predicted prices with Matplotlib.
- Extended the model to forecast future stock prices over a rolling 30-day window.

PROJECTS

SSH Brute-Force Detection Lab *Python*

- Built a custom intrusion detection tool that monitors SSH logs in real time and identifies brute-force login patterns.
- Implemented structured alerting to flag suspicious login attempts for faster security response.

CPU Scheduling Simulator & Visualizer *MERN Stack (MongoDB, Express, React, Node.js)*

- Developed a full-stack web application to simulate and visually compare CPU scheduling algorithms (FCFS, SJF, Round Robin, Priority).
- Built an interactive front end to display Gantt charts and performance metrics for each algorithm.

Tourism Booking System *PHP, MySQL, HTML, CSS*

- Developed a full-stack booking web application with separate admin and user portals, enabling users to browse destinations, check availability, and make reservations.
- Designed a relational MySQL schema to manage bookings, users, and destination data, with an admin panel for backend content and booking management.
