

POORNA PRASAD D R

Bengaluru, India | 7676457722 | ppoorna166@gmail.com | [LinkedIn](#)

SUMMARY

I have practical project experience as a developer in the areas of machine learning, full-stack web development, and cybersecurity. My projects have included a stock market prediction model, CPU scheduling simulator, Tourism Management system and SSH brute-force detection lab. I am skilled in Python, Java, JavaScript, C and PHP, and have a working knowledge of both SQL and NoSQL databases. I am currently pursuing a degree in MCA at PES University and am looking for opportunities to apply my skills in software development, cybersecurity and AI/ML positions.

TECHNICAL SKILLS

- Programming Languages: Java, Python, C, C++, JavaScript, HTML, CSS, PHP
- Databases: MySQL, MSSQL, MongoDB
- Web Technologies/Frameworks: React, Express.js, Node.js, PHP
- Tools: XAMPP, Git, GitHub, Windows, Linux
- Core Competencies: Problem Solving, Data Preprocessing & Feature Engineering, Effective Communication, Research

EDUCATION

Master of Computer Applications (MCA) *PES University, Bengaluru | Currently Pursuing*

Bachelor of Computer Applications (BCA) *BGS Business School, Bengaluru | 2025*

- CGPA: 8.04

Pre-University College *Aacharya Pre-University College, Hassan | 2022*

- Percentage: 83%

INTERNSHIP EXPERIENCE

AI & ML Intern — Inspire Global Technology

- Worked with the AI/ML team, using Python and machine learning methods on real data.
- Collected and processed historical stock market data with Python, yfinance, and pandas.
- Developed and tested machine learning models to predict stock prices.
- Evaluated model performance using MSE and R^2 metrics and created visualizations with Matplotlib.
- Focused on improving the prediction workflow and generating future stock price forecasts from historical data.

PROJECTS

Stock Market Predictor *Full Stack (React.js, Python, Flask, Scikit-learn, etc)*

- A full-stack stock price prediction application that uses historical market data and Machine Learning to predict future stock prices.

CPU Scheduling Simulator & Visualizer *MERN Stack (MongoDB, Express, React, Node.js)*

- Built a full-stack web application to simulate and visually compare CPU scheduling algorithms, including FCFS, SJF, Round Robin, and Priority.
- Developed an interactive front end to display Gantt charts and performance metrics for each algorithm.

Tourism Booking System *PHP, MySQL, HTML, CSS*

- Created a full-stack booking web application with separate admin and user portals. Users can browse destinations, check availability, and make reservations.
- Designed a relational MySQL schema to manage bookings, users, and destination data, along with an admin panel for backend content and booking management.
